

MCP (Model Context Protocol)

Integrate MCP servers in Claude desktop

Use cases:

1. What work related files are there in my downloads folder?
2. Write a note on “MCP” and save it in a new file on Desktop.
3. Organize all images on my desktop into a new folder called “images”
4. Use duckduckgo search and show today’s news

Integrate duckduckgo search MCP in Claude desktop

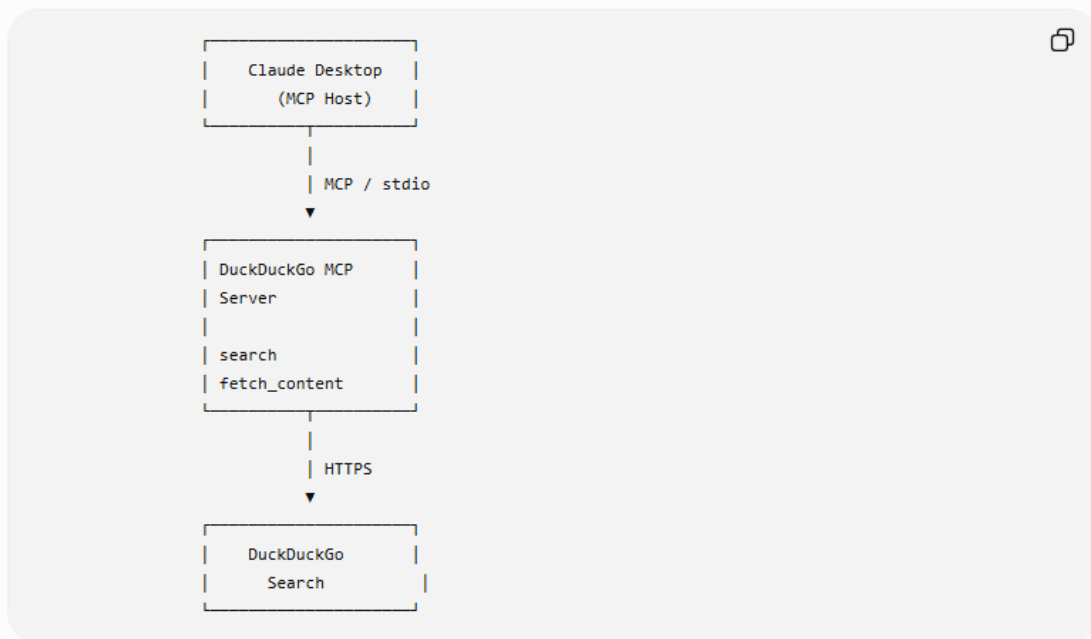

integrate duckduckgo mcp server in claude desktop

Yes. Since you're using **Windows + Claude Desktop**, the simplest approach is to install a local **DuckDuckGo MCP server** using `uvx` and register it in Claude Desktop.

I recommend the `duckduckgo-mcp-server` project because it supports Claude Desktop directly and does **not** require a DuckDuckGo API key. [GitHub +1](#)

1. Architecture

The integration will look like this:

Claude can then decide to call the DuckDuckGo `search` tool when you ask something like:

Search the web for the latest AWS Bedrock developments.

5. Add DuckDuckGo MCP

If your configuration is currently empty, use:

```
</> JSON
{
  "mcpServers": {
    "duckduckgo": {
      "command": "uvx",
      "args": [
        "duckduckgo-mcp-server"
      ]
    }
  }
}
```

This is the basic configuration documented by the MCP server project. [GitHub](#)

Important

If you already have other MCP servers, **don't delete them**.

For example:

```
</> JSON
{
  "mcpServers": {
    "filesystem": {
      "command": "npx",
      "args": [
        "-y",
        "@modelcontextprotocol/server-filesystem",
        "E:\\AIML"
      ]
    },
    "duckduckgo": {
      "command": "uvx",
      "args": [
        "duckduckgo-mcp-server"
      ]
    }
  }
}
```

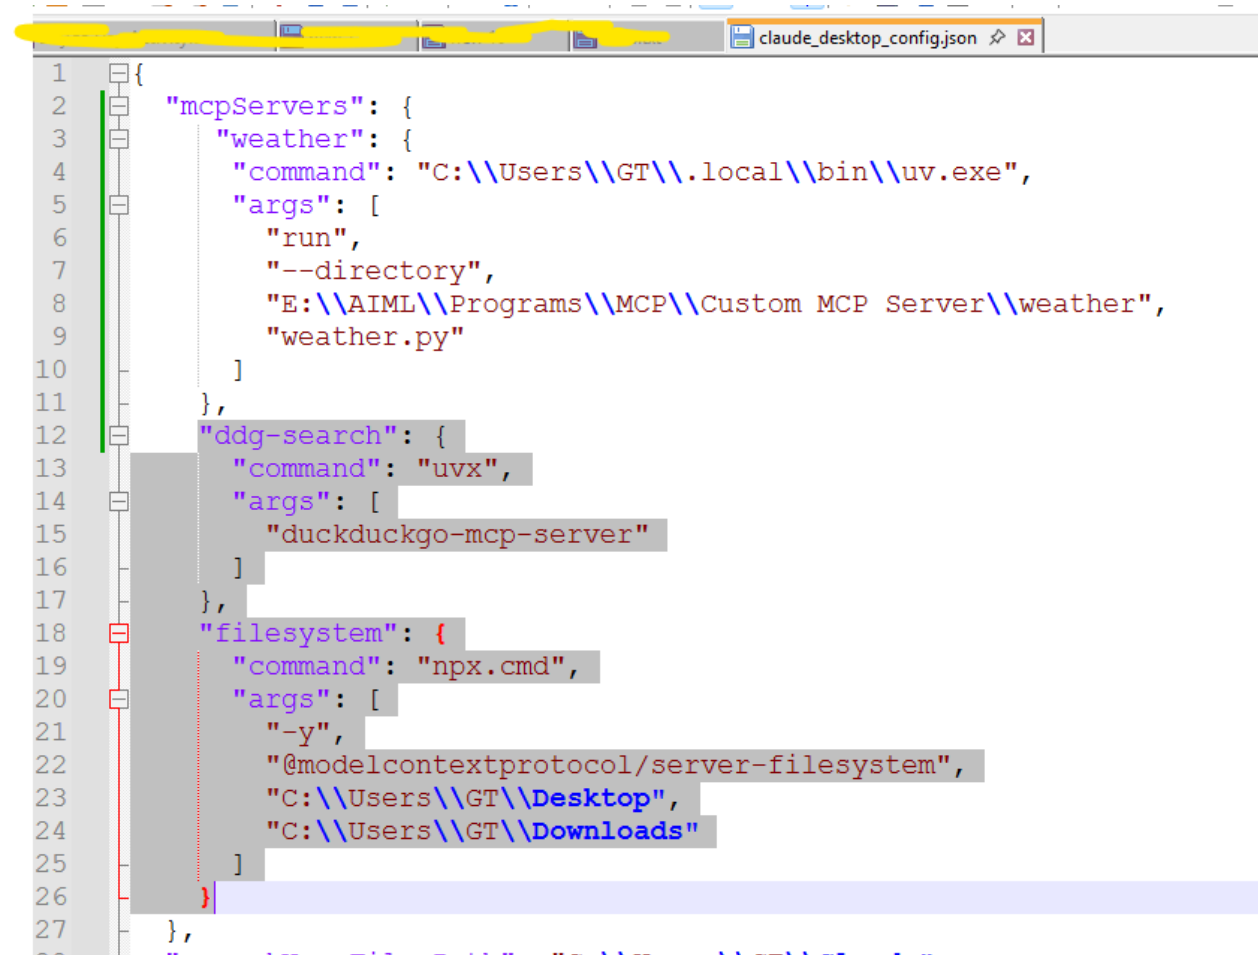

6. Restart Claude Desktop

Completely close Claude Desktop and start it again.

Add the below code in "claude_desktop_config.json" file

```
{
  "mcpServers": {
    "filesystem": {
      "command": "npx",
      "args": [
        "-y",
        "@modelcontextprotocol/server-filesystem",
        "E:\\AI ML"
      ]
    },
    "duckduckgo": {
      "command": "uvx",
      "args": [
        "duckduckgo-mcp-server"
      ]
    }
  }
}
```

```
1 {
2   "mcpServers": {
3     "weather": {
4       "command": "C:\\\\Users\\GT\\\\.local\\\\bin\\\\uv.exe",
5       "args": [
6         "run",
7         "--directory",
8         "E:\\\\AI ML\\\\Programs\\\\MCP\\\\Custom MCP Server\\\\weather",
9         "weather.py"
10      ]
11    },
12    "ddg-search": {
13      "command": "uvx",
14      "args": [
15        "duckduckgo-mcp-server"
16      ]
17    },
18    "filesystem": {
19      "command": "npx.cmd",
20      "args": [
21        "-y",
22        "@modelcontextprotocol/server-filesystem",
23        "C:\\\\Users\\GT\\\\Desktop",
24        "C:\\\\Users\\GT\\\\Downloads"
25      ]
26    }
27  }
28 }
```

Close Claude desktop (close from Task Manager) and reopen

💡 Claude's choice

Use prompts to get data

Prompt 1: “write a short note on how to use MCP and save it on my desktop”

The screenshot shows the Claude AI web interface. On the left is a sidebar with navigation options: 'New', 'Projects', 'Artifacts', 'Customize', 'Projects' (with a sub-option 'Pin projects to keep them here'), and 'Chats'. Under 'Chats', 'List desktop files' is selected. The main chat area displays a conversation:

- User prompt: "write a short note on how to use MCP and save it on my desktop"
- Assistant response: "Write File MCP_Notes.txt >"
- User follow-up: "Done — MCP_Notes.txt has been saved (overwritten with the same content) on your Desktop again. Let me know if you'd like me to change or expand anything in it."
- Assistant response: "is it coming from filesystem MCP?"
- Assistant response: "Yes — I used the **filesystem MCP tool** (`filesystem:write_file`) to create/overwrite that note directly at `C:\Users\G1\Desktop\MCP_Notes.txt` on your actual computer. That's the same MCP connector I used earlier to list your desktop contents (`filesystem:list_directory`) — it's what gives me real read/write access to your `Desktop` and `Downloads` folders, nothing else."

Below the chat is a text input field with a plus icon and the placeholder "Write a message...". At the bottom, there is a status bar with "Claude is AI and can make mistakes. Please double-check responses." on the left and "Sonnet 5 Medium" on the right.

Prompt 2: “use duckduckgo to findtoday's news”

This is a big story that's genuinely current — this is a real, ongoing conflict I wasn't previously aware of (post-dates my reliable knowledge). Here's a roundup of today's news:

US-Iran War (major ongoing story)

There's an active US-Iran war that's been running since roughly early 2026. As of the past few days: at least seven oil tankers have been struck in and beyond the Persian Gulf since Tuesday evening, as the United States and Iran escalate tanker attacks. On September 3, the Iranian Artesh conducted a missile and drone attack targeting US bases in Kuwait and the United Arab Emirates, likely to raise the costs of the US campaign against Iran. Trump reportedly said the war would end "immediately" after the midterm elections, according to a live report from The National. There's also a US-brokered Israel-Lebanon peace agreement in parallel — earlier this month the Red Cross transferred detained Lebanese civilians back to Lebanon as part of that deal.

BRICS Summit 2026

India is hosting/chairing this year's summit — Prime Minister Narendra Modi is BRICS President this year, the fourth time India has taken the helm of the grouping, with the bloc now spanning 11 nations and 47% of the world's population.

US Open Tennis

Big upset: Ben Shelton snapped Carlos Alcaraz's 18-match winning streak in Grand Slam majors in a four-hour, 28-minute quarterfinal battle.

Indian domestic politics

Several threads from ABP's morning bulletin — Uttar Pradesh CM Yogi Adityanath warned that those who threaten women's safety face "jail or hell," saying empowerment has to be visible on the ground, not just in slogans. BSP chief Mayawati has paused nephew Akash Anand's return to the party, conditioning it on his father-in-law Ashok Siddharth's retirement
